

Information about health screening for cervical cancer

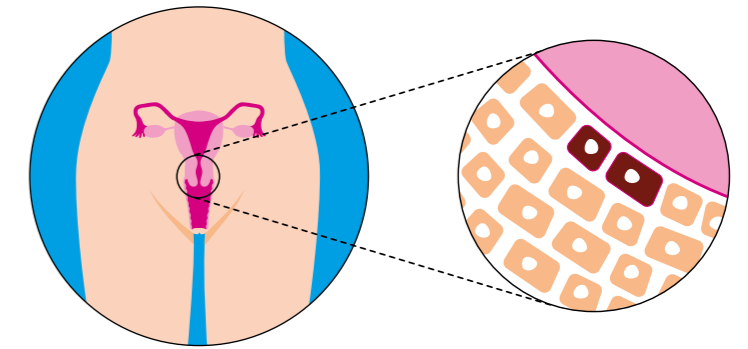

1 You will be invited for a free test.

2 It is a test to check the cervix.

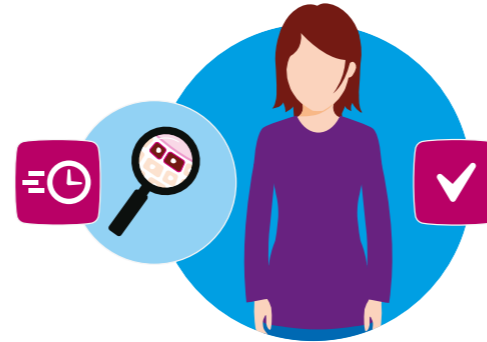

3 Cancer can sometimes develop in the cervix.

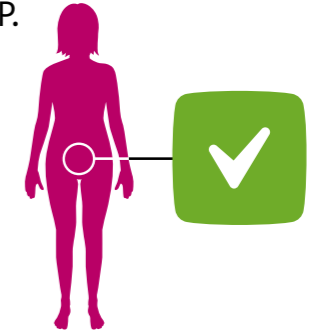

4 You would not notice it yourself. If there is cancer, or cells that could become cancer, this test lets us discover it early.

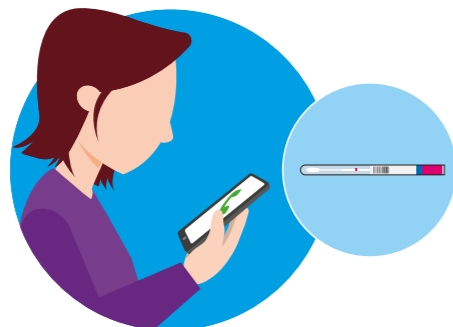

5 Early detection is better for your health.

6 That is why taking part in the health screening is important. You can decide if you want to take part. You can use the self-sampling test kit or have a smear test done by your GP.

7 Would you like to take part with the self-sampling test kit? Request a test kit from Bevolkingsonderzoek Nederland, the national population screening programme.

8 Would you like to take part using a smear test? Then call your doctor to make an appointment.

9 More information about the smear test and the self-sampling test kit is available [online](#).
